In the annals of public health crises, the AIDS epidemic of the 1980s and 1990s stands as a stark reminder of the devastating consequences of prejudice, inaction, and incompetence. This book lifts the veil on the shocking story of four scientists at the Centers for Disease Control and Prevention (CDC) whose actions had tragic implications for the lives of countless individuals.

Based on meticulous research and insider accounts, this book meticulously documents the homophobic and racist attitudes that permeated the CDC during the early years of the epidemic. These biases blinded the scientists to the true nature of the virus and led them to suppress vital information that could have saved lives.

The book meticulously chronicles the scientists' incompetence, highlighting their failure to follow basic scientific protocols and their disregard for the

ethical principles that should govern public health research. Their actions not only delayed the development of effective treatments but also shattered the trust of the LGBTQ+ community and communities of color.

With gripping detail, the book exposes the cover-ups, the internal conflicts, and the political machinations that allowed these scientists to continue their harmful practices for years. It exposes the systemic flaws that allowed bigotry and incompetence to flourish within a public health agency.

This book is not only a historical account but a cautionary tale for our time. It serves as a reminder of the dangers of prejudice and the importance of scientific integrity in the face of public health crises. It is a must-read for anyone concerned about public health, medical ethics, or the history of the AIDS epidemic.
